# SYSTEM DESCRIPTION OVERVIEW

---

- 
- The system has a pneumatic powered rear door operator with optional pneumatic powered side door locks.
  - System includes a dedicated air reservoir that is supplied from the trailer air brake system.
  - The system utilizes 12 volt power from either the trailer reefer unit or an auxiliary battery.

The system is battery operated and runs through a 7-way control box.

The system has multiple operations:

- Door opening/closing with a remote
- Side door opening/closing with a remote
- Turning the lights on/off with a remote
- Door opening/closing from the control panel
- Lights turned on/off from the control panel

Note: the system does not power the lights - only triggers the ground in the 7-way box. Nor can the side door locks be operated from the control panel. If either side door is open, the lock will be disabled.

*\*Locking systems are supplemental to standard hasp locks.*
